The leading UK based
developer and distributor of
EPoS software

TouchPoint Enhance your business at the point of sale

ICRTouch's flagship till software TouchPoint is effortless to use, reliable and proven. Developed over 15 years, thanks to annual software upgrades it remains cutting edge. We're confident TouchPoint is the most reliable software of its kind on the market.

ICRTouch has over 30 years experience in developing and supplying EPoS systems and we've sold over 50,000 software licences.

TouchPoint's reliable and it looks good too...

If the power fails and your freezer lets you down, at least you'll be able to count on TouchPoint. When the tills (and the lights) come back on you'll find you haven't lost any data. The system is robust and rugged and it doesn't crash, which means you don't lose a sale. It can't re-freeze the ice-cream though. Sorry.

TouchPoint features eye-catching touchscreen graphics and 1500 settings. It is one of the most adaptable EPoS software packages available in the UK.

Want your tills to match the tablecloths or the branded t-shirts? TouchPoint can be customised using a wide selection of colours and wallpapers. You can also request a bespoke design.

TouchPoint keeps your business running smoothly...

Easily handles all your requirements: scanning items, totalling the sale, juggling cash and cards.

Adapts to your business: from a single till in a small shop to a multi-site business operating many tills.

Simple to use and requires minimal training. New and part-time staff can quickly work a TouchPoint till with confidence, saving you time and maximising sales.

Asks the right questions at the right time - sales opportunities aren't missed. When an item is scanned TouchPoint prompts staff to talk about offers and deals.

Sets the standard for the management of loyalty and discount schemes.

Oversee reward points and money-off initiatives at no extra cost: it's already included in the system. Build a purchase history for customers and manage customer account balances.
